Successfully fork a GitHub repository and create a new RStudio project from fork <ul style="list-style-type: none"> Project called “Lastname-Trick-or-Treat” 	3	2.5	You did not name your repo or Rproject according to the instructions.
Set up project and workspace, pull in and examine data, fix mistakes Lastname-PS2.qmd <ul style="list-style-type: none"> Use at least 2 functions Assign data types Fix errors (factors, plots) 	3	1	Your project did not have a code folder. You did not examine the data upon loading it. You did not do any error checking for numeric variables.
Manipulate data and use it to correctly create Figure 1	3	3	good
Manipulate data and use it to correctly create figure 2	3	1.0	You didn't manipulate the data properly - there was no need for a group_by and summarise. Also you didn't adjust axis labels.
Create a correct summary data table that opens in a new view <ul style="list-style-type: none"> Sugar high, mean age, sd age, mean g candy, sd g candy 	3	1.5	Needed one table that opened in a new tab.
Manipulate data and use it to correctly create Figure 3	3	3	pretty good.
Thought processes are well documented outside of code blocks	3	2	You need to work on this.
Successfully open a pull request to add your changes to the forked repository <ul style="list-style-type: none"> Commit changes Open PR Link pasted in Canvas 	2	1.5	You did not submit a link on canvas.
Code represents material we have covered in GSWR Chs 2 - 4 and not elsewhere	2	2	good
